## Preamble

The rise of Information and Communication Technology (ICT) has profoundly affected modern society. Increasing applications of computers in almost all areas of human endeavor has led to vibrant industries with concurrent rapid change in technology.

As the computing field advances at a rapid pace, the students must possess a solid foundation that allows and encourages them to maintain relevant skills as the field evolves. Specific languages and technology platforms change over time. Thus students must continue to learn and adapt their skills throughout their careers. To develop this ability, students will be exposed to multiple programming languages, tools, paradigms and technologies as well as the fundamental underlying principles throughout this programme.

The programme offers required courses such as programming languages, data structures, computer architecture and organization, algorithms, database systems, operating systems, and software engineering; as well as specialized courses in artificial intelligence, computer-based communication networks, distributed computing, information security, graphics, human-computer interaction, multimedia, scientific computing, web technology, and other current topics in computer science.

The core philosophy of this programme is to –

- Form strong foundations of Computer Science
- Nurture programming, analytical & design skills for the real world problems.
- Introduce emerging trends to the students in gradual way.
- Groom the students for the challenges of ICT industry

The students these days not only aspire for a career in the industry but also look for research opportunities. The main aim of this programme is to deliver a modern curriculum that will equip graduates with strong theoretical and practical backgrounds to enable them to excel in the workplace and to be lifelong learners. Not only does it prepare the students for a career in Software industry, it also motivates them towards further studies and research opportunities. Graduating students, can thus take up postgraduate programmes in CS leading to research as well as R&D, can be employable at IT industries, or can adopt a business management career.

In the first year i.e. for semester I & II, basic foundation of important skills required for software development is laid. The syllabus proposes to have four core subjects of Computer science and two core courses of Mathematics-Statistics. All core subjects are proposed to have theory as well as practical tracks. While the Computer Science courses will form fundamental skills for solving computational problems, the Mathematics & Statistics course will inculcate research-oriented acumen. Ability Enhancement Courses on Soft Skill Development will ensure an overall and holistic development of the students. The syllabus design for further semesters encompasses more advanced and specialized courses of Computer Science.

We sincerely believe that any student taking this programme will get very strong foundation and exposure to basics, advanced and emerging trends of the subject. We hope that the students' community and teachers' fraternity will appreciate the treatment given to the courses in the syllabus.

We wholeheartedly thank all experts who shared their valuable feedbacks and suggestions in order to improve the contents; we have sincerely attempted to incorporate each of them. We further thank Chairperson and members of Board of Studies for their confidence in us.

Special thanks to Department of Computer Science and colleagues from various colleges, who volunteered or have indirectly, helped designing certain specialized courses and the syllabus as a whole.

effect from  
Academic Year 2018-2019

## **Preamble**

This is the third year curriculum in the subject of Computer Science. The revised structure is designed to transform students into technically competent, socially responsible and ethical Computer Science professionals. In these Semesters we have made the advancements in the subject based on the previous Semesters Knowledge.

In the first year basic foundation of important skills required for software development is laid. Second year of this course is about studying core computer science subjects. The third year is the further advancement which covers developing capabilities to design formulations of computing models and its applications in diverse areas.

The proposed curriculum contains two semesters, each Semester contains two Electives: Elective-I and II. Every Elective contains three papers based on specific areas of Computer Science. It also includes one Skill Enhancement paper per semester, helps the student to evaluate his/her computer science domain specific skills and also to meet industry expectations. This revised curriculum has not only taken the specific areas of computer science into consideration but will also give the opportunity to the student to prove his/her ability in the subject practically through the Project Implementation. In Semester V and Semester VI student has to undertake a Project. It can boost his/her confidence and also can encourage the student to perform innovations in the subject as the choice of the Project topic is kept open covering most of the areas of Computer Science subject as per the students interest and the subject they have learned during the Course.

Proposed Curriculum contains challenging and varied subjects aligned with the current trend with the introduction of Machine Intelligence specific subject such as Artificial Intelligence, Information Retrieval. Data Management related subjects such as Cloud Computing and Data Science. Image processing topics such as Game Programming, Digital Image Processing. Introduction of physical world through Architecting of IoT and Wireless Sensor Networks and Mobile Communication. Security domain is also evolved by the introduction of Ethical Hacking, Cyber Forensic and Information and Network Security. To get the hands on experience Linux Server Administration and Web Services topics are included.

In essence, the objective of this syllabus is to create a pool of technologically savvy, theoretically strong, innovatively skilled and ethically responsible generation of computer science professionals. Hope that the teacher and student community of University of Mumbai will accept and appreciate the efforts.

## Preamble

The revised and restructured curriculum for the Three-year integrated course is systematically designed considering the current industry needs in terms of skills sets demanded under new technological environment. It also endeavours to align the programme structure and course curriculum with student aspirations and corporate expectations. The proposed curriculum is more contextual, industry affable and suitable to cater the needs of society and nation in present day context.

Second year of this course is about studying core computer science subjects. Theory of Computation course provides understanding of grammar, syntax and other elements of modern language designs. It also covers developing capabilities to design formulations of computing models and its applications in diverse areas.

The course in Operating System satisfies the need of understanding the structure and functioning of system. Programming holds key indispensable position in any curriculum of Computer Science. It is essential for the learners to know how to use object oriented paradigms. There is also one dedicated course Android Developer Fundamentals as a skill enhancement catering to modern day needs of Mobile platforms and applications. The syllabus has Database Systems courses in previous semesters. The course in Database Management Systems is its continuation in third semester. The course has objectives to develop understanding of concepts and techniques for data management along with covers concepts of database at advance level.

The course of Combinatorics and Graph Theory in third semester and the course of Linear Algebra in fourth semester take the previous courses in Mathematics. Graph theory is rapidly moving into the mainstream mainly because of its applications in diverse fields which include can further open new opportunities in the areas of genomics, communications networks and coding theory, algorithms and computations and operations research.

Introducing one of the upcoming concepts Physical Computing and IoT programming will definitely open future area as Embedded Engineer, involvement in IoT projects, Robotics and many more. The RasPi is a popular platform as it offers a complete Linux server in a tiny platform for a very low cost and custom-built hardware with minimum complex hardware builds which is easier for projects in education domain.

b.	Enter the number from the user and depending on whether the number is even or odd, print out an appropriate message to the user.
c.	Write a program to generate the Fibonacci series.
d.	Write a function that reverses the user defined value.
e.	Write a function to check the input value is Armstrong and also write the function for Palindrome.
f.	Write a recursive function to print the factorial for a given number.
<b>2.</b>	<b>Write the program for the following:</b>
a.	Write a function that takes a character (i.e. a string of length 1) and returns True if it is a vowel, False otherwise.
b.	Define a function that computes the <i>length</i> of a given list or string.
c.	Define a <i>procedure</i> histogram() that takes a list of integers and prints a histogram to the screen. For example, histogram([4, 9, 7]) should print the following:  <pre>**** ***** *****</pre>
<b>3.</b>	<b>Write the program for the following:</b>
a.	A <i>pangram</i> is a sentence that contains all the letters of the English alphabet at least once, for example: <i>The quick brown fox jumps over the lazy dog</i> . Your task here is to write a function to check a sentence to see if it is a pangram or not.
b.	Take a list, say for example this one:  <pre>a=[1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89]</pre> and write a program that prints out all the elements of the list that are less than 5.

<b>4.</b>	<b>Write the program for the following:</b>
a.	Write a program that takes two lists and returns True if they have at least one common member.
b.	Write a Python program to print a specified list after removing the 0th, 2nd, 4th and 5th elements.

a.	Design a class that store the information of student and display the same
b.	Implement the concept of inheritance using python
c.	Create a class called <code>Numbers</code> , which has a single class attribute called <code>MULTIPLIER</code> , and a constructor which takes the parameters <code>x</code> and <code>y</code> (these should all be numbers). i. Write a method called <code>add</code> which returns the sum of the attributes <code>x</code> and <code>y</code> . ii. Write a class method called <code>multiply</code> , which takes a single number parameter <code>a</code> and returns the product of <code>a</code> and <code>MULTIPLIER</code> . iii. Write a static method called <code>subtract</code> , which takes two number parameters, <code>b</code> and <code>c</code> , and returns <code>b - c</code> . iv. Write a method called <code>value</code> which returns a tuple containing the values of <code>x</code> and <code>y</code> . Make this method into a property, and write a setter and a deleter for manipulating the values of <code>x</code> and <code>y</code> .
<b>8.</b>	<b>Write the program for the following:</b>
a.	Open a new file in IDLE (“New Window” in the “File” menu) and save it as <code>geometry.py</code> in the directory where you keep the files you create for this course. Then copy the functions you wrote for calculating volumes and areas in the “Control Flow and Functions” exercise into this file and save it.  Now open a new file and save it in the same directory. You should now be able

	<p>to import your own module like this:</p> <pre>import geometry</pre> <p>Try and add <code>print dir(geometry)</code> to the file and run it.</p> <p>Now write a function <code>pointyShapeVolume(x, y, squareBase)</code> that calculates the volume of a square pyramid if <code>squareBase</code> is <code>True</code> and of a right circular cone if <code>squareBase</code> is <code>False</code>. <code>x</code> is the length of an edge on a square if <code>squareBase</code> is <code>True</code> and the radius of a circle when <code>squareBase</code> is <code>False</code>. <code>y</code> is the height of the object. ## Methods

### **Topics to be taught using interactive teaching and the workshop method.**

It is a good idea to ask students to make a list of the different purposes for talk. Some of these purposes are to:

explain                      describe                      narrate

explore  
discuss

analyse  
argue

imagine  
persuade

We synthesize in discussion and argument, evaluate in exploring and persuasion and create in narration and imagining.

### **A note on listening**

The whole point of speaking and listening is that it should be interactive. Person A speaks, Person B listens, understands, considers and answers: 'This is so, isn't it....' - Yes, but....'. Perhaps we should call these skills '**Listening - Thinking - Speaking**'. This is the process by which things get done, by which people think through a problem and find a solution.

Some listening is passive. It looks as if it is to some purpose, but the listener may be thinking, 'If I look as if I am attentive, then perhaps nobody will challenge me to speak.' It's better than looking dreamily round the room or talking to oneself, but it does not prove anything about the quality of listening. That can only be done if the listener makes a response, such as:

- summing up previous contributions and moving the discussion on;
- answering points from a speaker;
- supporting speakers who have lost the drift of their arguments;
- revisiting what has already been said, but in other words;
- acting as note-taker and clarifying what has been written;
- asking questions after a talk/ video clip/movie/documentary and engaging in a discussion.

Hence if there is no listening, there is no speaking. A student giving a talk must engage in conversation with his listeners at the end. (except perhaps at the end of term exams.) However, questions alone may not reveal a high level of listening.

The list given above includes some challenging listening and speaking skills. It follows that **reading aloud may not be counted as a speaking and listening activity**, although the talk that might precede a reading is valid. It also follows that reading from a script or speaking from memory is not speaking and listening either.

**Starting from the beginning:** Do my students need practice in speaking and listening? They have enough to talk already!

Maybe so, but there is a difference between informal talk and sustained task completion. Try using some of these exercises just to be sure of the levels you are dealing with in a class. You are looking for clarity, confidence, a minimum of preparation and talking strictly without notes.

1. Give directions from college to.....wherever.
2. Telephone someone to say that you cannot make an appointment and ask for another date.
3. Go to a shop and explain that an article they repaired still doesn't work.

4. Explain a particular function on a computer to a novice.
5. Entertain a visitor to the college for five minutes until the principal is free.
6. Explain to you teacher/Principal why you did something extremely silly, and apologise.
7. Give a two - minute talk to the class and answer questions.
8. Bring an article into school and persuade someone to buy it.

( Check these activities 1 to 8 against the list of objectives and learning outcomes to see what sorts of practice they give. What levels of ability might each activity demonstrate? Remember that any one activity may be applied to several skills and may touch on others).

**The secret** of speaking and listening, or listening - thinking - and speaking, is to do plenty of it. If you teach informally you would have better control of the situation when no one is at the back or the front and there is no opportunity to hide behind the furniture. If students understand that talk is an essential part of English, they will probably settle down to the activity more easily.

Often group work could be incorporated by dividing the class into groups of about 5-7 so that nobody is discouraged from speaking.

Effective speaking and listening in small groups - teacher circulates, gives occasional prompts but doesn't normally join in. Body language must indicate respect and interest and students then become confident in our presence.

Occasional use of Indianisms are fine as long as they are not very frequent and do not hamper good communication, and are in fact, only used to enhance effective communication. If asked the student is expected to know the alternate phrase in formal/standard English.

Eg. ".....and the tu - tu mei - mei has already begun". - Barkha Dutt on NDTV. i.e ".....and the blame game has already begun".

**Process Talk** - Process talk is a timed and disciplined period of discussion, monitored by the teacher. Through process talk students learn about topics and their linguistic skills are challenged as they do not speak from notes. The actual aim of process talk is that it is a stepping stone to writing and therefore cannot be assessed. However, it is an invaluable tool for practice in spoken English. Though much of the talk may be halting or disjointed, some students will make their best contributions under these conditions. The bigger the class more may opt out, but the active, sustained participation of a few may be a good way to introduce the Spoken English course at the beginning of the term. The teacher should sum up what has happened at the end of the class. E.g. The topic is 'Elephants'. A video is shown first - National Geographic. (A video contains a vast amount of information and it is unlikely that students remember the same bits.) Then a search engine presented three interesting and informative sites on the internet:

- a) [www.pbs.org/wnet/nature/elephants](http://www.pbs.org/wnet/nature/elephants) - it was accessible, easy to navigate and provided a number of resources. These included: 'life of the elephant', 'tale of the trunk' and 'poaching problems'. There was a long list of links and a bibliography.
- b) Another good site was [www.elephants.com](http://www.elephants.com) - an article on how elephants began, with a link to global news and an up-to-date series of news links.
- c) [www.nczooetrack.org/diary/loomis-diary/index.html](http://www.nczooetrack.org/diary/loomis-diary/index.html) was less immediately useful, but offered a worthwhile and entertaining series of diary entries.

### **Debates and Group Discussions**

You may wish to have students respond to worldwide or local matters that are controversial. In the first session, they could amass arguments for and against and decide where they stand individually. This could lead to a mini debate which could be presented to the class by one of the groups. The issues could be those currently being discussed in the newspapers or magazines. Local issues are often good to use since they may provoke more argument and are often easier to understand. If they touch on moral issues, the argument will be better.

Here are three workshop examples that have worked. The first two are set in Bombay, the last one in Goa.

- \* A young girl was refused an essential kidney operation because she had taken drugs. The story was in the newspapers. Participants read the article to discover the reasons for the decision and discuss the practical and moral issues.
- \* A student was expelled from school because of a long and unruly hairstyle which was against the school rules. His influential parents were very angry and spoke to the press. Participants discussed the actions of the school and whether they were necessary. (In recent times we have read of so many cases of children being meted out physical punishment at the hands of teachers in other states. Students would have definite opinions about this and will be eager to talk on the subject. )
- \* There was a shocking case of senseless bad driving which killed a popular young man. Participants discussed their reactions and the problems of young drivers who have recently passed their tests.

### **Examples of Group talk**

**Media 1** Students analyse and evaluate the reporting of an incident or issue in more than one newspaper.( e.g.Navhind & Herald; Times Of India & The Indian Express or The Hindu ) they examine the factual reporting, the extent to which the news is made dramatic, sad or happy, the differences in language, the headlines, the amount of detail given, and so on

*End result* : analytical / critical

**Media 2** Students plan and design a sales campaign for an item such as crocodile meat, a currently unfashionable garment, or a new type of mobile phone. They decide on how it is to be marketed, the consumers to be targeted, the message by which it will be sold, the content of commercials and the design of the newspaper and magazine ads. There is an oral report to the

class with a layout of visuals or audio-visual plan is they wish. There is an oral presentation to the class.

*End result* : informative / persuasive

**Problem solving** Students decide on a group of people, for example, the blind or the arthritic, whom they could help by designing some object that would make some daily jobs easier. Students could actually ask the blind or the arthritic. Institutions that care for such people are often happy to talk to students who care. Egs: gardening tools for the blind and easy to use door handles for the arthritic. Students could discuss, formulate a proposal, design and present their ideas.

*End result* : Informative / explanatory

**Brainstorming** This can be used to apply the mind to any problem. The rule is that no suggestion however silly is to be rejected.

**Role Plays** Students are given five minutes to look at a card explaining a role - play situation and think about what they are going to say. The situations are imaginary but perfectly normal and natural situations. Students play their own age and are not expected to act. They are not expected to deal with unrealistic problems! Although it is a role play the student does not necessarily have to pretend to be someone else though the teacher probably will. For instance, the teacher might play the role of a parent and the student's task could be to try to persuade mom/dad to sanction a large sum of money so that he/she could go on a holiday with friends.

**Solo work** A valid part of a varied programme of speaking and listening. Careers today may depend on the ability to stand up to train a group of new workers, to give a presentation in front of managers, or to persuade customers to buy gimmicky machines. Sometimes there are prestigious public - speaking or debating competitions entered by perhaps a few of your students. Use the opportunity to train in front of the whole class. Ask the class for feedback. Some students speak with interest and enthusiasm about their work/experiences/hobbies/holidays and perhaps the English department is the best place for debriefing. It is also a good exercise to get students to reteach a lesson they have recently had in another subject, or a new lesson in History or Psychology or.....any subject. It gives the others an opportunity to ask questions. Beware: the rest of the class may sometimes know the lesson better than their 'teachers'. You can substitute the word 'presentation' for talk. Students can learn to use the overhead projector or computerised presentation techniques. Presentations can be given in pairs.

**Problems** during group work:

- The time problem is helped if you accept that most speaking and listening is not solo work but is done in pairs and small groups.
- Noise - 'By all means do speaking and listening, but I don't want to hear a sound!'
- Not everyone is involved.
- Some groups not working well - pecking order.
- Some groups - briefest of answers.
- Unkindness to others whose comments they regard as silly.

## Solutions

- THERE WILL ALWAYS BE NOISE.
- Tactfully ensure that the loudest and busiest are not always in charge. Talk to the most active about a possible role in encouraging and bringing out the shy members of the group.
- Keep topics open - never closed. Put someone who is adept at opening a discussion into a group to help others.
- Ensure that it is understood that everyone should be respected for what they say. You can argue but not so the original speaker feels a fool. BE TOUGH ON THIS.

**Material** the teacher carries **into the class room** should be gleaned from :

- Newspapers
- Documentaries (either shown to the class or seen at home and discussed)
- Video clippings ( eg: Language in use , Cambridge ELT 4 VCD's )
- Events - news or cultural ( eg: Carnival, Shigmo, festivals, election campaigns, sports, current affairs
- NDTV/ BBC - issues discussed on ' Hard Talk', 'We The People', 'The Big Fight' .....
- Films and cinema

**Grade Descriptions for Group Activity (to assist the teacher)**

<b>Mark Band 1</b> <b>17-20 marks</b>	Can argue ideas and opinions in persuasive detail without dominating the rest of the group; adept at acting as group leader; usefully refers back to previous points; always looking to suggest new approaches and to move forward; listens sympathetically and considers the views of others fully.
<b>Mark Band 2</b> <b>13-16 marks</b>	Can argue ideas and opinions soundly but may at times overshadow other members of the group; is capable of leading the group but with only partial assurance; refers back to previous points soundly but not entirely successfully; recognises the need to suggest new approaches but implements this only partially; listens with a degree of sympathy for others views but has a tendency to interrupt at times.
<b>Mark Band 3</b> <b>9-12 marks</b>	Frequent but generally brief contributions are made; generally accepts a position of group member rather than facilitator/leader; makes occasional reference to previous points; may help to support new approaches but rarely initiates them; listens carefully and responds briefly but appropriately to others.
<b>Mark Band 4</b> <b>5-8 marks</b>	Brief and infrequent contributions are made; plays a limited part in the group; cannot utilise previous points; follows the general drift of the discussion but struggles to support new approaches; listens inconsistently

	and may even drift away from the discussion
<b>Mark Band 5</b> <b>1-4 marks</b>	Makes only one or two contributions or may offer mostly inappropriate contributions; <b>plays no real role</b> in group membership; is largely ignorant of previous points; does not offer support for new approaches; may appear to listen but shows little evidence of listening.

#### Individual Activity – 40 marks

Mark	Content & Structure [out of 20]	Vocabulary [out of 10]	Fluency [out of 10]
<b>15 - 19</b> <b>&amp;</b> <b>9-10</b>	The student demonstrates ability to use a variety of structures accurately and consistently. There may be errors when sophistication is attempted, but the examiner is convinced that the student is confidently in control of the structures used. Full & well organised content.	The student shows enough command of vocabulary to respond with some precision. Shades of meaning are achieved and some sophisticated information/ ideas are communicated. There will be only the occasional misuse of vocabulary.	The student shows sustained ability to maintain a conversation and to contribute at some length. The student can respond to change in direction of the conversation and perhaps initiate new topics. Pronunciation and intonation are appropriate, with only the occasional slip.
<b>16 - 18</b> <b>&amp;</b> <b>7 - 8</b>	There may be mostly simple structures, but some more complex sentences will be attempted successfully. There will be some errors but these will not impede communication. Sound use of content.	The student has a sufficient range of vocabulary to convey information and ideas but there is lack of precision. Vocabulary is not wide or varied.	The student responds relevantly to questions and at a length which makes frequent prompting unnecessary. Stress and intonation patterns are generally accurate. Little effort is required by the listener.
<b>13 - 15</b>	The student will be uneasy	Vocabulary conveys	The student makes a real

<p><b>&amp;</b> <b>5-6</b></p>	<p>and error-prone when venturing beyond simple structures. However, simple accuracy will often be achieved and communication will be maintained. Adequate use of content.</p>	<p>simple ideas and information clearly but lacks precision. There is some searching for words and hesitation when going beyond simplicity.</p>	<p>attempt to respond to questions. S/he may need frequent prompting and will tend to offer one sentence at a time, but keeps conversation going. Some noticeable inaccuracy of stress and intonation, but unlikely to impede communication.</p>
<p><b>10 – 12</b> <b>&amp;</b> <b>3-4</b></p>	<p>Responses will usually be single words or very simple sentences -with errors. Error will tend to blur but not obscure communication. Content is thin or inconsistently used.</p>	<p>Vocabulary will sometimes be inadequate to convey even simple ideas and there will be frequent pauses.</p>	<p>Responses tend to be brief and widely spaced. The candidate has to be encouraged to go beyond the single word response. Stress and intonation inaccuracy causes some communication difficulty, but candidate can usually be understood by a sympathetic listener.</p>
<p><b>5 – 9</b> <b>&amp;</b> <b>1-2</b></p>	<p>Single word responses will be the norm and attempts at structured sentences will rarely achieve communication. However, some attempt at a response will be made at points during the interview. Content is mostly undeveloped and/or very thin.</p>	<p>Enough English words are known to convey occasional snippets of information, but conversation will be very limited and confused.</p>	<p>Responses are so brief and imprecise that little is communicated. Use of single words is the norm, and there will be long gaps. Stress and intonation patterns cause difficulty for even the most sympathetic listener. Repetition is necessary to achieve communication.</p>
<p><b>0 – 5</b> <b>&amp;</b> <b>0</b></p>	<p>Completely limited/no attempt at a response.</p>	<p>Completely limited/no attempt at a response.</p>	<p>No response/inaccuracy of stress and intonation prevents communication even after several repetitions.</p>

**In the world of work, a high percentage of communication is by talk, and people are known by the way they use talk to carry out their duties with efficiency, tact or persuasion. Soon it will be normal to write by speaking into a machine which then prints what we say. It is a brave new world and it is through highly developed speaking skills that we shall be empowered to meet it.**

## **Aims**

- To nurture interest in the students for the subject of Zoology
- To create awareness of the basic and modern concepts of Zoology
- To orient students about the importance of abiotic and biotic factors of environment and their conservation.
- To provide an insight to the basic nutritional and health aspects of human life.
- To inculcate good laboratory practices in students and to train them about scientific handling of important instruments.

## Preamble

While presenting this new syllabus to the teachers and students of Semester I and Semester II (F.Y.B.Sc.) Zoology, I am extremely happy to state that for the first time efforts have been made to seek inputs of all the stake holders to make it more relevant.

In the first meeting of the Board of Studies an apex committee was formed to study syllabi worldwide with a view to include modern modules and plan semesters at UG and PG programs in advance to avoid overlapping and duplication of topics in various courses.

Meeting with the industry at the Indian Merchants' Chamber and with the meritorious alumni helped adding need based components. For the first time students were a part of the syllabus committee and the process became participative when the draft was finalized in an open meeting with all the Zoology teachers after having sought democratic criticism on the proposed syllabus placed on the University website for about one month.

While following the guidelines of UGC, use of animals is excluded from the practicals, substituting the same with audiovisual, ICT and simulation aids and that the syllabus is made more interesting with new, innovative topics. Providing the pedagogy as also indicating objectives and desired outcome of every topic for the teachers, and question bank for the students apart from the question paper pattern became an integral part of the syllabus, therefore.

Care is taken to provide the drafts from time to time and declare the final syllabus well in advance enabling the teachers to make preparations before commencement of the academic year and facilitating students to execute their right to know the details before admissions.

The success of this revamped syllabus will depend totally on the enthusiasm of the teachers which is very high all throughout the process and their hands will be strengthened by publishing the University text books for the first time. This curriculum of the Zoologists, for the Zoologists and by the Zoologists developed with the united efforts will take our ever progressive subject to greater heights in the years to come.

## **PEDAGOGY**

### **F.Y.B.Sc. Syllabus**

First year B.Sc. course is the entry point for the students to undergraduate classes which acts like a guiding force for them to make up their mind in selecting a subject they would wish to pursue their studies in future for carving their career in a particular field.

The syllabus committee in the subject of Zoology for F.Y.B.Sc. Class has designed this syllabus with a view that it is most appropriate time when we transform our traditional closed classroom teaching learning practices to more of field and activity based studies, the correct methodology for the study of Natural Sciences. It is recommended to orient the students about ecosystem, bio-diversity, wildlife conservation and management with the help of models, photographs, movies, documentaries, charts and use of ICT and then take learners to field to have realistic experiences. This will enable them to get true insight about endurance of animal life in relation to human activity inducing sentiment of love, care and protection in the young mind and heart leading to understand importance of co-existence and conservation of bio-diversity. An interaction with the officials of wildlife protection force should be allowed to get basic knowledge about the relevant acts through lectures which for creating awareness about these issues and also to make best use of the knowledge in their own interest as well as for the country. Instrumentation and Animal Biotechnology component would initiate academia- industry interface and should be edified in collaboration with expertise from relevant research institutes and industrial establishments and entrepreneurs by inviting them as guest speakers or through industrial visits, excursions for practical experience about the principle, working and application of the instruments for commercial use. Population ecology need to be explained in the context with census to enlighten pupils about the effect of diversity and dynamism of human population on socio economic status of India. Experts from the field of nutrition and health can be invited to enlighten learners on the topics of nutritional value of food, balanced diet, ill-effects of eating junk food and aerated drinks. Medical professionals, relevant NGO's maybe engaged to educate students regarding myth, precautionary measures, immunization drives of common diseases, ill-effects of self-medication and stress, significance of BMI through series of programmes. During medical emergencies it is of immense importance to provide first aid assistance to the diseased within the golden period i.e. of few minutes. This enhances the possibility to save life, thus it is strongly recommended to form a consortium of colleges to conduct training in rotation of first aid techniques for teachers and students both with the help of organizations like Red Cross Society, Health Department of Civic Bodies, Civil Defence Department and Local Self Government etc.

## **PREFACE**

Holistic development of students is the main purpose of the curriculum. While this is attempted through prescribing dynamic and updated curricular inputs, the new course that will be effective from the academic year 2018- 2019, will follow the Semester mode. The main aim of the revision of syllabus was to modify it to meet the unique requirements of students, up gradation of knowledge in the subject of zoology and to inculcate the skill of reasoning. The contents of the syllabus have been drawn-up to accommodate the widening horizons of the discipline of Biological Sciences. All possible attempts have been made to update the syllabus by incorporating current and most recent developments in various branches of Zoological Sciences, nevertheless, classical zoology also has been given due weightage. Introduction of an elective paper in zoology will also provide a glimpse of its application. Inclusion of research methodology to the undergrads is the highlight of the course. I am sure that these revised syllabi will cater to better understanding of the subject and beyond.

I appreciate and congratulate the entire team of syllabus framing for the co-operation, tireless work and wish them success.

**Chairperson,  
Ad-hoc Board of Studies in Zoology**

## **PREAMBLE**

As a traditional procedural norm of the University of Mumbai, it is the Board of Studies that includes various disciplines, which revive the syllabi after completion of a cycle of five years. Due to rapid advancement in technology, new ideas and concepts, and an ocean of information being generated every day that necessitates updating the students in this present era of exponential information and knowledge. However, in the former practice of syllabus revision, students were unable to imbibe new ideas and concepts as there was limited scope of including them within the syllabi that was theoretical with poor applicability

Looking at the employment generating potential and need of trained human resource in various service sectors in our state, it was became imperative to make a breakthrough from the traditional practice of revising syllabus; and instead giving an opportunity to the stakeholders to adapt and acclimatize with the changes around them and imbibe knowledge which shall enable them to develop entrepreneurship and / or employment avenues and opportunities after pursuing the coveted degree.

With this intention, the Board of Studies in Zoology took decision to put before the S. Y. B. Sc. Zoology students one elective, so that they can study topics of their interest. Board of Studies in Zoology is the only Board in the University that has offered two electives for the S. Y. B. Sc. students and safeguarded their career. Further, BoS formulated Four Syllabus Review Committees (one per course with composition of 01 Convenor and 04 Members). All the committee members worked extensively and exhaustively; and prepared draft of the syllabus. The said draft was uploaded on the website of University of Mumbai for public criticism. The invited opinions were thereby incorporated in the syllabus to make it versatile and student friendly with high applicability. Further, the draft syllabus was re-discussed in the workshop where several teachers and students contributed their views to improve it. In the academic year 2016-17, new syllabus was introduced but it is revived immediately after two years with inclusion of new concepts and techniques. Due care is taken to make the syllabus interdisciplinary, flexible and choice based. All the member teachers have tried their level best to come out with “Need Based Syllabus” that may spark motives in all the stakeholders. We hope that the stakeholders will enjoy the learning of this syllabus in the classrooms, laboratories and on the field.

## PEDAGOGY

While disseminating the content of the present syllabus, it is imperative and expected that the facilitator is well versed or/and develops their Pedagogical Content Knowledge (PCK), which would include aspects like content, methodology, evaluation and so on. At the onset, the facilitator may include various topic-specific instructional strategies, employing the use of organizers (topic announcement in advance, making models, flip charts, photography, etc). Learning of topics on chromosomes, nucleic acids, cell biology, biomolecules, physiological processes are hence revised, and during the presentations by the learner, the facilitator is able to gauge the preconceptions and learning disabilities. Any misunderstanding of basic concepts can thus be clarified such as 'difference between gene and allele'. Peer teaching is another aspect of pedagogy which takes into account participative learning thus enhancing the learning of the content and making it enjoyable, for example, the use of 'Punnet squares' for working out the crosses in various illustrations on monohybrid and dihybrid ratios, problems based on inheritance, pedigree analysis, molecular biology etc. A declarative learning strategy, which employs the use of familiar contexts and analogies, illustrative diagrams, questioning techniques, discussions, may be used for topics like multiple alleles, polygenic inheritance, DNA testing for paternity issues, scientific attitude, methodology, scientific writing etc. This would enhance the relevance of these topics and engender motivation, thereby balancing the blend of content and pedagogy in teaching. The syllabus includes practical investigations, individual or group student experiments, simulations to assist learners in visualizing and /or internalizing the concepts and processes. The learner could be encouraged to organize field trips, nature trails and treks in and around the ecosystems like lakes, beaches, sanctuaries, national-parks etc. for learning topics like ethology and conservation, amazing animals, applied zoology, pollution and other such, where sensitization, awareness and action are to be invoked within the learner. Visits to museums, and an interdisciplinary approach with various departments like geology, history, geography, chemistry, psychology, medicine would bring about a multi and cross approach to learning concepts such as paleontological evidences, nucleic acids, physiological processes, biomolecules, holistic health and neurological and genetic diseases . ICT enabled learning is the need of the hour and could include screening of documentaries, videos, animations, PPT's, and the use of social media such as Whatsaap, Instagram, Facebook be employed for impactful and continued learning. Facilitators can upload the teaching material, videos of lectures, links to websites for not only enhancing but also focusing and developing the topics of interest by the learner by way of self-study. More importantly, the syllabus endeavours to develop life skills by discovering and

honing entrepreneurial skills of the learner. To accomplish this purpose, visits to apiary, vermicomposting units, and dairy could be encouraged, also interviews with various entrepreneurs, officials of funding agencies must be undertaken to comprehend the nuances of business. Also small projects on various entrepreneurial aspects like setting up vermicomposting bins and aquaria, sale of the vermicompost or setting up an ornamental fish farms, innovations in dairy products and its sale could be encouraged in the campuses. The elective papers are so construed that the learner is driven to gain knowledge, experience through activity-based assignments, and projects, which would enhance entrepreneurial skills, a logical understanding and analysis of business functions.

## Methods

### **Topics to be taught using interactive teaching and the workshop method.**

It is a good idea to ask students to make a list of the different purposes for talk. Some of these purposes are to:

explain                      describe                      narrate

explore  
discuss

analyse  
argue

imagine  
persuade

We synthesize in discussion and argument, evaluate in exploring and persuasion and create in narration and imagining.

### **A note on listening**

The whole point of speaking and listening is that it should be interactive. Person A speaks, Person B listens, understands, considers and answers: 'This is so, isn't it....' - Yes, but....'. Perhaps we should call these skills '**Listening - Thinking - Speaking**'. This is the process by which things get done, by which people think through a problem and find a solution.

Some listening is passive. It looks as if it is to some purpose, but the listener may be thinking, 'If I look as if I am attentive, then perhaps nobody will challenge me to speak.' It's better than looking dreamily round the room or talking to oneself, but it does not prove anything about the quality of listening. That can only be done if the listener makes a response, such as:

- summing up previous contributions and moving the discussion on;
- answering points from a speaker;
- supporting speakers who have lost the drift of their arguments;
- revisiting what has already been said, but in other words;
- acting as note-taker and clarifying what has been written;
- asking questions after a talk/ video clip/movie/documentary and engaging in a discussion.

Hence if there is no listening, there is no speaking. A student giving a talk must engage in conversation with his listeners at the end. (except perhaps at the end of term exams.) However, questions alone may not reveal a high level of listening.

The list given above includes some challenging listening and speaking skills. It follows that **reading aloud may not be counted as a speaking and listening activity**, although the talk that might precede a reading is valid. It also follows that reading from a script or speaking from memory is not speaking and listening either.

**Starting from the beginning:** Do my students need practice in speaking and listening? They have enough to talk already!

Maybe so, but there is a difference between informal talk and sustained task completion. Try using some of these exercises just to be sure of the levels you are dealing with in a class. You are looking for clarity, confidence, a minimum of preparation and talking strictly without notes.

1. Give directions from college to.....wherever.
2. Telephone someone to say that you cannot make an appointment and ask for another date.
3. Go to a shop and explain that an article they repaired still doesn't work.

4. Explain a particular function on a computer to a novice.
5. Entertain a visitor to the college for five minutes until the principal is free.
6. Explain to you teacher/Principal why you did something extremely silly, and apologise.
7. Give a two - minute talk to the class and answer questions.
8. Bring an article into school and persuade someone to buy it.

( Check these activities 1 to 8 against the list of objectives and learning outcomes to see what sorts of practice they give. What levels of ability might each activity demonstrate? Remember that any one activity may be applied to several skills and may touch on others).

**The secret** of speaking and listening, or listening - thinking - and speaking, is to do plenty of it. If you teach informally you would have better control of the situation when no one is at the back or the front and there is no opportunity to hide behind the furniture. If students understand that talk is an essential part of English, they will probably settle down to the activity more easily.

Often group work could be incorporated by dividing the class into groups of about 5-7 so that nobody is discouraged from speaking.

Effective speaking and listening in small groups - teacher circulates, gives occasional prompts but doesn't normally join in. Body language must indicate respect and interest and students then become confident in our presence.

Occasional use of Indianisms are fine as long as they are not very frequent and do not hamper good communication, and are in fact, only used to enhance effective communication. If asked the student is expected to know the alternate phrase in formal/standard English.

Eg. ".....and the tu - tu mei - mei has already begun". - Barkha Dutt on NDTV. i.e ".....and the blame game has already begun".

**Process Talk** - Process talk is a timed and disciplined period of discussion, monitored by the teacher. Through process talk students learn about topics and their linguistic skills are challenged as they do not speak from notes. The actual aim of process talk is that it is a stepping stone to writing and therefore cannot be assessed. However, it is an invaluable tool for practice in spoken English. Though much of the talk may be halting or disjointed, some students will make their best contributions under these conditions. The bigger the class more may opt out, but the active, sustained participation of a few may be a good way to introduce the Spoken English course at the beginning of the term. The teacher should sum up what has happened at the end of the class. E.g. The topic is 'Elephants'. A video is shown first - National Geographic. (A video contains a vast amount of information and it is unlikely that students remember the same bits.) Then a search engine presented three interesting and informative sites on the internet:

- a) [www.pbs.org/wnet/nature/elephants](http://www.pbs.org/wnet/nature/elephants) - it was accessible, easy to navigate and provided a number of resources. These included: 'life of the elephant', 'tale of the trunk' and 'poaching problems'. There was a long list of links and a bibliography.
- b) Another good site was [www.elephants.com](http://www.elephants.com) - an article on how elephants began, with a link to global news and an up-to-date series of news links.
- c) [www.nczooetrack.org/diary/loomis-diary/index.html](http://www.nczooetrack.org/diary/loomis-diary/index.html) was less immediately useful, but offered a worthwhile and entertaining series of diary entries.

### **Debates and Group Discussions**

You may wish to have students respond to worldwide or local matters that are controversial. In the first session, they could amass arguments for and against and decide where they stand individually. This could lead to a mini debate which could be presented to the class by one of the groups. The issues could be those currently being discussed in the newspapers or magazines. Local issues are often good to use since they may provoke more argument and are often easier to understand. If they touch on moral issues, the argument will be better.

Here are three workshop examples that have worked. The first two are set in Bombay, the last one in Goa.

- \* A young girl was refused an essential kidney operation because she had taken drugs. The story was in the newspapers. Participants read the article to discover the reasons for the decision and discuss the practical and moral issues.
- \* A student was expelled from school because of a long and unruly hairstyle which was against the school rules. His influential parents were very angry and spoke to the press. Participants discussed the actions of the school and whether they were necessary. (In recent times we have read of so many cases of children being meted out physical punishment at the hands of teachers in other states. Students would have definite opinions about this and will be eager to talk on the subject. )
- \* There was a shocking case of senseless bad driving which killed a popular young man. Participants discussed their reactions and the problems of young drivers who have recently passed their tests.

### **Examples of Group talk**

**Media 1** Students analyse and evaluate the reporting of an incident or issue in more than one newspaper.( e.g.Navhind & Herald; Times Of India & The Indian Express or The Hindu ) they examine the factual reporting, the extent to which the news is made dramatic, sad or happy, the differences in language, the headlines, the amount of detail given, and so on

*End result* : analytical / critical

**Media 2** Students plan and design a sales campaign for an item such as crocodile meat, a currently unfashionable garment, or a new type of mobile phone. They decide on how it is to be marketed, the consumers to be targeted, the message by which it will be sold, the content of commercials and the design of the newspaper and magazine ads. There is an oral report to the

class with a layout of visuals or audio-visual plan is they wish. There is an oral presentation to the class.

*End result* : informative / persuasive

**Problem solving** Students decide on a group of people, for example, the blind or the arthritic, whom they could help by designing some object that would make some daily jobs easier. Students could actually ask the blind or the arthritic. Institutions that care for such people are often happy to talk to students who care. Egs: gardening tools for the blind and easy to use door handles for the arthritic. Students could discuss, formulate a proposal, design and present their ideas.

*End result* : Informative / explanatory

**Brainstorming** This can be used to apply the mind to any problem. The rule is that no suggestion however silly is to be rejected.

**Role Plays** Students are given five minutes to look at a card explaining a role - play situation and think about what they are going to say. The situations are imaginary but perfectly normal and natural situations. Students play their own age and are not expected to act. They are not expected to deal with unrealistic problems! Although it is a role play the student does not necessarily have to pretend to be someone else though the teacher probably will. For instance, the teacher might play the role of a parent and the student's task could be to try to persuade mom/dad to sanction a large sum of money so that he/she could go on a holiday with friends.

**Solo work** A valid part of a varied programme of speaking and listening. Careers today may depend on the ability to stand up to train a group of new workers, to give a presentation in front of managers, or to persuade customers to buy gimmicky machines. Sometimes there are prestigious public - speaking or debating competitions entered by perhaps a few of your students. Use the opportunity to train in front of the whole class. Ask the class for feedback. Some students speak with interest and enthusiasm about their work/experiences/hobbies/holidays and perhaps the English department is the best place for debriefing. It is also a good exercise to get students to reteach a lesson they have recently had in another subject, or a new lesson in History or Psychology or.....any subject. It gives the others an opportunity to ask questions. Beware: the rest of the class may sometimes know the lesson better than their 'teachers'. You can substitute the word 'presentation' for talk. Students can learn to use the overhead projector or computerised presentation techniques. Presentations can be given in pairs.

**Problems** during group work:

- The time problem is helped if you accept that most speaking and listening is not solo work but is done in pairs and small groups.
- Noise - 'By all means do speaking and listening, but I don't want to hear a sound!'
- Not everyone is involved.
- Some groups not working well - pecking order.
- Some groups - briefest of answers.
- Unkindness to others whose comments they regard as silly.

## Solutions

- THERE WILL ALWAYS BE NOISE.
- Tactfully ensure that the loudest and busiest are not always in charge. Talk to the most active about a possible role in encouraging and bringing out the shy members of the group.
- Keep topics open - never closed. Put someone who is adept at opening a discussion into a group to help others.
- Ensure that it is understood that everyone should be respected for what they say. You can argue but not so the original speaker feels a fool. BE TOUGH ON THIS.

**Material** the teacher carries **into the class room** should be gleaned from :

- Newspapers
- Documentaries (either shown to the class or seen at home and discussed)
- Video clippings ( eg: Language in use , Cambridge ELT 4 VCD's )
- Events - news or cultural ( eg: Carnival, Shigmo, festivals, election campaigns, sports, current affairs
- NDTV/ BBC - issues discussed on ' Hard Talk', 'We The People', 'The Big Fight' .....
- Films and cinema

#### Individual Activity – 40 marks

Mark	Content & Structure [out of 20]	Vocabulary [out of 10]	Fluency [out of 10]
<b>15 - 19</b> <b>&amp;</b> <b>9-10</b>	The student demonstrates ability to use a variety of structures accurately and consistently. There may be errors when sophistication is attempted, but the examiner is convinced that the student is confidently in control of the structures used. Full & well organised content.	The student shows enough command of vocabulary to respond with some precision. Shades of meaning are achieved and some sophisticated information/ ideas are communicated. There will be only the occasional misuse of vocabulary.	The student shows sustained ability to maintain a conversation and to contribute at some length. The student can respond to change in direction of the conversation and perhaps initiate new topics. Pronunciation and intonation are appropriate, with only the occasional slip.
<b>16 - 18</b> <b>&amp;</b> <b>7 - 8</b>	There may be mostly simple structures, but some more complex sentences will be attempted successfully. There will be some errors but these will not impede communication. Sound use of content.	The student has a sufficient range of vocabulary to convey information and ideas but there is lack of precision. Vocabulary is not wide or varied.	The student responds relevantly to questions and at a length which makes frequent prompting unnecessary. Stress and intonation patterns are generally accurate. Little effort is required by the listener.
<b>13 - 15</b>	The student will be uneasy	Vocabulary conveys	The student makes a real

<p><b>&amp;</b> <b>5-6</b></p>	<p>and error-prone when venturing beyond simple structures. However, simple accuracy will often be achieved and communication will be maintained. Adequate use of content.</p>	<p>simple ideas and information clearly but lacks precision. There is some searching for words and hesitation when going beyond simplicity.</p>	<p>attempt to respond to questions. S/he may need frequent prompting and will tend to offer one sentence at a time, but keeps conversation going. Some noticeable inaccuracy of stress and intonation, but unlikely to impede communication.</p>
<p><b>10 – 12</b> <b>&amp;</b> <b>3-4</b></p>	<p>Responses will usually be single words or very simple sentences -with errors. Error will tend to blur but not obscure communication. Content is thin or inconsistently used.</p>	<p>Vocabulary will sometimes be inadequate to convey even simple ideas and there will be frequent pauses.</p>	<p>Responses tend to be brief and widely spaced. The candidate has to be encouraged to go beyond the single word response. Stress and intonation inaccuracy causes some communication difficulty, but candidate can usually be understood by a sympathetic listener.</p>
<p><b>5 – 9</b> <b>&amp;</b> <b>1-2</b></p>	<p>Single word responses will be the norm and attempts at structured sentences will rarely achieve communication. However, some attempt at a response will be made at points during the interview. Content is mostly undeveloped and/or very thin.</p>	<p>Enough English words are known to convey occasional snippets of information, but conversation will be very limited and confused.</p>	<p>Responses are so brief and imprecise that little is communicated. Use of single words is the norm, and there will be long gaps. Stress and intonation patterns cause difficulty for even the most sympathetic listener. Repetition is necessary to achieve communication.</p>
<p><b>0 – 5</b> <b>&amp;</b> <b>0</b></p>	<p>Completely limited/no attempt at a response.</p>	<p>Completely limited/no attempt at a response.</p>	<p>No response/inaccuracy of stress and intonation prevents communication even after several repetitions.</p>

**In the world of work, a high percentage of communication is by talk, and people are known by the way they use talk to carry out their duties with efficiency, tact or persuasion. Soon it will be normal to write by speaking into a machine which then prints what we say. It is a brave new world and it is through highly developed speaking skills that we shall be empowered to meet it.**

## **PREFACE**

Holistic development of students is the main purpose of the curriculum. While this is attempted through prescribing dynamic and updated curricular inputs, the new course that will be effective from the academic year 2018- 2019, will follow the Semester mode. The main aim of the revision of syllabus was to modify it to meet the unique requirements of students, up gradation of knowledge in the subject of zoology and to inculcate the skill of reasoning. The contents of the syllabus have been drawn-up to accommodate the widening horizons of the discipline of Biological Sciences. All possible attempts have been made to update the syllabus by incorporating current and most recent developments in various branches of Zoological Sciences, nevertheless, classical zoology also has been given due weightage. Introduction of an elective paper in zoology will also provide a glimpse of its application. Inclusion of research methodology to the undergrads is the highlight of the course. I am sure that these revised syllabi will cater to better understanding of the subject and beyond.

I appreciate and congratulate the entire team of syllabus framing for the co-operation, tireless work and wish them success.

**Chairperson,  
Ad-hoc Board of Studies in Zoology**

## PREAMBLE

As a traditional procedural norm of the University of Mumbai, it is the Board of Studies that includes various disciplines, which revive the syllabi after completion of a cycle of five years. Due to rapid advancement in technology, new ideas and concepts, and an ocean of information being generated every day that necessitates updating the students in this present era of exponential information and knowledge. However, in the former practice of syllabus revision, students were unable to imbibe new ideas and concepts as there was limited scope of including them within the syllabi that was theoretical with poor applicability

Looking at the employment generating potential and need of trained human resource in various service sectors in our state, it was became imperative to make a breakthrough from the traditional practice of revising syllabus; and instead giving an opportunity to the stakeholders to adapt and acclimatize with the changes around them and imbibe knowledge which shall enable them to develop entrepreneurship and / or employment avenues and opportunities after pursuing the coveted degree.

With this intention, the Board of Studies in Zoology took decision to put before the S. Y. B. Sc. Zoology students one elective, so that they can study topics of their interest. Board of Studies in Zoology is the only Board in the University that has offered two electives for the S. Y. B. Sc. students and safeguarded their career. Further, BoS formulated Four Syllabus Review Committees (one per course with composition of 01 Convenor and 04 Members). All the committee members worked extensively and exhaustively; and prepared draft of the syllabus. The said draft was uploaded on the website of University of Mumbai for public criticism. The invited opinions were thereby incorporated in the syllabus to make it versatile and student friendly with high applicability. Further, the draft syllabus was re-discussed in the workshop where several teachers and students contributed their views to improve it. In the academic year 2016-17, new syllabus was introduced but it is revived immediately after two years with inclusion of new concepts and techniques. Due care is taken to make the syllabus interdisciplinary, flexible and choice based. All the member teachers have tried their level best to come out with “Need Based Syllabus” that may spark motives in all the stakeholders. We hope that the stakeholders will enjoy the learning of this syllabus in the classrooms, laboratories and on the field.

## PEDAGOGY

While disseminating the content of the present syllabus, it is imperative and expected that the facilitator is well versed or/and develops their Pedagogical Content Knowledge (PCK), which would include aspects like content, methodology, evaluation and so on. At the onset, the facilitator may include various topic-specific instructional strategies, employing the use of organizers (topic announcement in advance, making models, flip charts, photography, etc). Learning of topics on chromosomes, nucleic acids, cell biology, biomolecules, physiological processes are hence revised, and during the presentations by the learner, the facilitator is able to gauge the preconceptions and learning disabilities. Any misunderstanding of basic concepts can thus be clarified such as 'difference between gene and allele'. Peer teaching is another aspect of pedagogy which takes into account participative learning thus enhancing the learning of the content and making it enjoyable, for example, the use of 'Punnett squares' for working out the crosses in various illustrations on monohybrid and dihybrid ratios, problems based on inheritance, pedigree analysis, molecular biology etc. A declarative learning strategy, which employs the use of familiar contexts and analogies, illustrative diagrams, questioning techniques, discussions, may be used for topics like multiple alleles, polygenic inheritance, DNA testing for paternity issues, scientific attitude, methodology, scientific writing etc. This would enhance the relevance of these topics and engender motivation, thereby balancing the blend of content and pedagogy in teaching. The syllabus includes practical investigations, individual or group student experiments, simulations to assist learners in visualizing and /or internalizing the concepts and processes. The learner could be encouraged to organize field trips, nature trails and treks in and around the ecosystems like lakes, beaches, sanctuaries, national-parks etc. for learning topics like ethology and conservation, amazing animals, applied zoology, pollution and other such, where sensitization, awareness and action are to be invoked within the learner. Visits to museums, and an interdisciplinary approach with various departments like geology, history, geography, chemistry, psychology, medicine would bring about a multi and cross approach to learning concepts such as paleontological evidences, nucleic acids, physiological processes, biomolecules, holistic health and neurological and genetic diseases. ICT enabled learning is the need of the hour and could include screening of documentaries, videos, animations, PPT's, and the use of social media such as WhatsApp, Instagram, Facebook be employed for impactful and continued learning. Facilitators can upload the teaching material, videos of lectures, links to websites for not only enhancing but also focusing and developing the topics of interest by the learner by way of self-study. More importantly, the syllabus endeavours to develop life skills by discovering and

honing entrepreneurial skills of the learner. To accomplish this purpose, visits to apiary, vermicomposting units, and dairy could be encouraged, also interviews with various entrepreneurs, officials of funding agencies must be undertaken to comprehend the nuances of business. Also small projects on various entrepreneurial aspects like setting up vermicomposting bins and aquaria, sale of the vermicompost or setting up an ornamental fish farms, innovations in dairy products and its sale could be encouraged in the campuses. The elective papers are so construed that the learner is driven to gain knowledge, experience through activity-based assignments, and projects, which would enhance entrepreneurial skills, a logical understanding and analysis of business functions.

#### **IV. Introduction**

The project report should be documented with scientific approach to the solution of the problem that the students have sought to address. The project report should be prepared in order to solve the problem in a methodical and professional manner, making due references to appropriate techniques, technologies and professional standards. The student should start the documentation process from the first phase of software development so that one can easily identify the issues to be focused upon in the ultimate project report. The student should also include the details from the project diary, in which they will record the progress of their project throughout the course. The project report should contain enough details to enable examiners to evaluate the work. The important points should be highlighted in the body of the report, with details often referred to appendices.

### Abstract

This should be one/two short paragraphs (100-150 words total), summarising the project work. It is important that this is not just a re-statement of the original project outline. A suggested flow is background, project aims and main achievements. From the abstract, a reader should be able to ascertain if the project is of interest to them and, it should present results of which they may wish to know more details.

### Acknowledgements

This should express student's gratitude to those who have helped in the preparation of project.

**Table of Contents:** The table of contents gives the readers a view of the detailed structure of the report. The students would need to provide section and subsection headings with associated pages. The formatting details of these sections and subsections are given below.

**Table of Figures:** List of all Figures, Tables, Graphs, Charts etc. along with their page numbers in a table of figures.

### Chapter 1: Introduction

The introduction has several parts as given below:

**Background:** A description of the background and context of the project and its relation to work already done in the area. Summarise existing work in the area concerned with the project work.

Objectives: Concise statement of the aims and objectives of the project. Define exactly what is going to be done in the project; the objectives should be about 30 /40 words.

Purpose, Scope and Applicability: The description of Purpose, Scope, and Applicability are given below:

- Purpose: Description of the topic of the project that answers questions on why this project is being done. How the project could improve the system its significance and theoretical framework.
- Scope: A brief overview of the methodology, assumptions and limitations. The students should answer the question: What are the main issues being covered in the project? What are the main functions of the project?
- Applicability: The student should explain the direct and indirect applications of their work. Briefly discuss how this project will serve the computer world and people.

Achievements: Explain what knowledge the student achieved after the completion of the work. What contributions has the project made to the chosen area? Goals achieved - describes the degree to which the findings support the original objectives laid out by the project. The goals may be partially or fully achieved, or exceeded.

Organisation of Report: Summarising the remaining chapters of the project report, in effect, giving the reader an overview of what is to come in the project report.

## Chapter 2: Survey of Technologies

In this chapter Survey of Technologies should demonstrate the students awareness and understanding of Available Technologies related to the topic of the project. The student should give the detail of all the related technologies that are necessary to complete the project. The should describe the technologies available in the chosen area and present a comparative study of all those Available Technologies. Explain why the student selected the one technology for the completion of the objectives of the project.

## Chapter 3: Requirements and Analysis

Problem Definition: Define the problem on which the students are working in the project.

Provide details of the overall problem and then divide the problem into sub-problems. Define each sub-problem clearly.

**Requirements Specification:** In this phase the student should define the requirements of the system, independent of how these requirements will be accomplished. The Requirements Specification describes the things in the system and the actions that can be done on these things. Identify the operation and problems of the existing system.

**Planning and Scheduling:** Planning and scheduling is a complicated part of software development. Planning, for our purposes, can be thought of as determining all the small tasks that must be carried out in order to accomplish the goal. Planning also takes into account, rules, known as constraints, which, control when certain tasks can or cannot happen. Scheduling can be thought of as determining whether adequate resources are available to carry out the plan. The student should show the Gantt chart and Program Evaluation Review Technique (PERT).

**Software and Hardware Requirements:** Define the details of all the software and hardware needed for the development and implementation of the project.

- **Hardware Requirement:** In this section, the equipment, graphics card, numeric co-processor, mouse, disk capacity, RAM capacity etc. necessary to run the software must be noted.
- **Software Requirements:** In this section, the operating system, the compiler, testing tools, linker, and the libraries etc. necessary to compile, link and install the software must be listed.

**Preliminary Product Description:** Identify the requirements and objectives of the new system. Define the functions and operation of the application/system the students are developing as project.

**Conceptual Models:** The student should understand the problem domain and produce a model of the system, which describes operations that can be performed on the system, and the allowable sequences of those operations. Conceptual Models could consist of complete Data Flow Diagrams, ER diagrams, Object-oriented diagrams, System Flowcharts etc.

#### Chapter 4: System Design

Describes desired features and operations in detail, including screen layouts, business rules, process diagrams, pseudocode and other documentation.

**Basic Modules:** The students should follow the divide and conquer theory, so divide the overall problem into more manageable parts and develop each part or module separately. When all modules are ready, the student should integrate all the modules into one system. In this phase, the student should briefly describe all the modules and the functionality of these modules.

**Data Design:** Data design will consist of how data is organised, managed and manipulated.

- **Schema Design:** Define the structure and explanation of schemas used in the project.
- **Data Integrity and Constraints:** Define and explain all the validity checks and constraints provided to maintain data integrity.

**Procedural Design:** Procedural design is a systematic way for developing algorithms or procedurals.

- **Logic Diagrams:** Define the systematical flow of procedure that improves its comprehension and helps the programmer during implementation. e.g., Control Flow Chart, Process Diagrams etc.
- **Data Structures:** Create and define the data structure used in procedures.
- **Algorithms Design:** With proper explanations of input data, output data, logic of processes, design and explain the working of algorithms.

**User Interface Design:** Define user, task, environment analysis and how to map those requirements in order to develop a “User Interface”. Describe the external and internal components and the architecture of user interface. Show some rough pictorial views of the user interface and its components.

**Security Issues:** Discuss Real-time considerations and Security issues related to the project and explain how the student intends avoiding those security problems. What are the security policy plans and architecture?

**Test Cases Design:** Define test cases, which will provide easy detection of errors and mistakes with in a minimum period of time and with the least effort. Explain the different conditions in which the students wish to ensure the correct working of the project.

## Chapter 5: Implementation and Testing

**Implementation Approaches:** Define the plan of implementation, and the standards the students have used in the implementation.

Coding Details and Code Efficiency: Students not need include full source code, instead, include only the important codes (algorithms, applets code, forms code etc). The program code should contain comments needed for explaining the work a piece of code does. Comments may be needed to explain why it does it, or, why it does a particular way.

The student can explain the function of the code with a shot of the output screen of that program code.

- Code Efficiency: The student should explain how the code is efficient and how the students have handled code optimisation.

Testing Approach: Testing should be according to the scheme presented in the system design chapter and should follow some suitable model – e.g., category partition, state machine-based. Both functional testing and user-acceptance testing are appropriate. Explain the approach of testing.

- Unit Testing: Unit testing deals with testing a unit or module as a whole. This would test the interaction of many functions but, do confine the test within one module.

- Integrated Testing: Brings all the modules together into a special testing environment, then checks for errors, bugs and interoperability. It deals with tests for the entire application. Application limits and features are tested here.

Modifications and Improvements: Once the students finish the testing they are bound to be faced with bugs, errors and they will need to modify your source code to improve the system. Define what modification are implemented in the system and how it improved the system.

## Chapter 6: Results and Discussion

Test Reports: Explain the test results and reports based on the test cases, which should show that the project is capable of facing any problematic situation and that it works fine in different conditions. Take the different sample inputs and show the outputs.

User Documentation: Define the working of the software; explain its different functions, components with screen shots. The user document should provide all the details of the product in such a way that any user reading the manual, is able to understand the working and functionality of the document.

## Chapter 7: Conclusions

Conclusion: The conclusions can be summarised in a fairly short chapter (2 or 3 pages). This chapter brings together many of the points that would have made in the other chapters.

Limitations of the System: Explain the limitations encountered during the testing of the project that the students were not able to modify. List the criticisms accepted during the demonstrations of the project.

Future Scope of the Project describes two things: firstly, new areas of investigation prompted by developments in this project, and secondly, parts of the current work that was not completed due to time constraints and/or problems encountered.

## REFERENCES

It is very important that the students acknowledge the work of others that they have used or adapted in their own work, or that provides the essential background or context to the project. The use of references is the standard way to do this. Please follow the given standard for the references for books, journals, and online material. The citation is mandatory in both the reports.

## GLOSSARY

If you the students any acronyms, abbreviations, symbols, or uncommon terms in the project report then their meaning should be explained where they first occur. If they go on to use any of them extensively then it is helpful to list them in this section and define the meaning.

## APPENDICES

These may be provided to include further details of results, mathematical derivations, certain illustrative parts of the program code (e.g., class interfaces), user documentation etc.

In particular, if there are technical details of the work done that might be useful to others who wish to build on this work, but that are not sufficiently important to the project as a whole to justify being discussed in the main body of the project, then they should be included as appendices.

## VI. SUMMARY

Project development usually involves an engineering approach to the design and development of a software system that fulfils a practical need. Projects also often form an important focus for discussion at interviews with future employers as they provide a detailed example of what the students are capable of achieving. In this course the students can choose your project topic from the lists given in Unit 4: Category-wise Problem Definition.

### **\* NOTE ABOUT PROJECT VIVA VOCE:**

Student may be asked to write code for problem during VIVA to demonstrate his coding capabilities and he/she may be asked to write any segment of coding used in the in the project. The project can be done in group of at most four students. However, the length and depth of the project should be justified for the projects done in group. A big project can be modularised and different modules can be assigned as separate project to different students.

Marks Distribution:

#### **IV. Introduction**

The project report should be documented with scientific approach to the solution of the problem that the students have sought to address. The project report should be prepared in order to solve the problem in a methodical and professional manner, making due references to appropriate techniques, technologies and professional standards. The student should start the documentation process from the first phase of software development so that one can easily identify the issues to be focused upon in the ultimate project report. The student should also include the details from the project diary, in which they will record the progress of their project throughout the course. The project report should contain enough details to enable examiners to evaluate the work. The important points should be highlighted in the body of the report, with details often referred to appendices.

### Role and Responsibility Form

Sample format for Role and Responsibility Form is given in Appendix 4 of this block. Students should follow the given format.

### Abstract

This should be one/two short paragraphs (100-150 words total), summarising the project work. It is important that this is not just a re-statement of the original project outline. A suggested flow is background, project aims and main achievements. From the abstract, a reader should be able to ascertain if the project is of interest to them and, it should present results of which they may wish to know more details.

### Acknowledgements

This should express student's gratitude to those who have helped in the preparation of project.

**Table of Contents:** The table of contents gives the readers a view of the detailed structure of the report. The students would need to provide section and subsection headings with associated pages. The formatting details of these sections and subsections are given below.

**Table of Figures:** List of all Figures, Tables, Graphs, Charts etc. along with their page numbers in a table of figures.

### Chapter 1: Introduction

The introduction has several parts as given below:

**Background:** A description of the background and context of the project and its relation to work already done in the area. Summarise existing work in the area concerned with the project work.

Objectives: Concise statement of the aims and objectives of the project. Define exactly what is going to be done in the project; the objectives should be about 30 /40 words.

Purpose, Scope and Applicability: The description of Purpose, Scope, and Applicability are given below:

- Purpose: Description of the topic of the project that answers questions on why this project is being done. How the project could improve the system its significance and theoretical framework.
- Scope: A brief overview of the methodology, assumptions and limitations. The students should answer the question: What are the main issues being covered in the project? What are the main functions of the project?
- Applicability: The student should explain the direct and indirect applications of their work. Briefly discuss how this project will serve the computer world and people.

Achievements: Explain what knowledge the student achieved after the completion of the work. What contributions has the project made to the chosen area? Goals achieved - describes the degree to which the findings support the original objectives laid out by the project. The goals may be partially or fully achieved, or exceeded.

Organisation of Report: Summarising the remaining chapters of the project report, in effect, giving the reader an overview of what is to come in the project report.

## Chapter 2: Survey of Technologies

In this chapter Survey of Technologies should demonstrate the students awareness and understanding of Available Technologies related to the topic of the project. The student should give the detail of all the related technologies that are necessary to complete the project. The should describe the technologies available in the chosen area and present a comparative study of all those Available Technologies. Explain why the student selected the one technology for the completion of the objectives of the project.

## Chapter 3: Requirements and Analysis

Problem Definition: Define the problem on which the students are working in the project.

Provide details of the overall problem and then divide the problem into sub-problems. Define each sub-problem clearly.

**Requirements Specification:** In this phase the student should define the requirements of the system, independent of how these requirements will be accomplished. The Requirements Specification describes the things in the system and the actions that can be done on these things. Identify the operation and problems of the existing system.

**Planning and Scheduling:** Planning and scheduling is a complicated part of software development. Planning, for our purposes, can be thought of as determining all the small tasks that must be carried out in order to accomplish the goal. Planning also takes into account, rules, known as constraints, which, control when certain tasks can or cannot happen. Scheduling can be thought of as determining whether adequate resources are available to carry out the plan. The student should show the Gantt chart and Program Evaluation Review Technique (PERT).

**Software and Hardware Requirements:** Define the details of all the software and hardware needed for the development and implementation of the project.

- **Hardware Requirement:** In this section, the equipment, graphics card, numeric co-processor, mouse, disk capacity, RAM capacity etc. necessary to run the software must be noted.
- **Software Requirements:** In this section, the operating system, the compiler, testing tools, linker, and the libraries etc. necessary to compile, link and install the software must be listed.

**Preliminary Product Description:** Identify the requirements and objectives of the new system. Define the functions and operation of the application/system the students are developing as project.

**Conceptual Models:** The student should understand the problem domain and produce a model of the system, which describes operations that can be performed on the system, and the allowable sequences of those operations. Conceptual Models could consist of complete Data Flow Diagrams, ER diagrams, Object-oriented diagrams, System Flowcharts etc.

#### Chapter 4: System Design

Describes desired features and operations in detail, including screen layouts, business rules, process diagrams, pseudocode and other documentation.

**Basic Modules:** The students should follow the divide and conquer theory, so divide the overall problem into more manageable parts and develop each part or module separately. When all modules are ready, the student should integrate all the modules into one system. In this phase, the student should briefly describe all the modules and the functionality of these modules.

**Data Design:** Data design will consist of how data is organised, managed and manipulated.

- **Schema Design:** Define the structure and explanation of schemas used in the project.
- **Data Integrity and Constraints:** Define and explain all the validity checks and constraints provided to maintain data integrity.

**Procedural Design:** Procedural design is a systematic way for developing algorithms or procedurals.

- **Logic Diagrams:** Define the systematical flow of procedure that improves its comprehension and helps the programmer during implementation. e.g., Control Flow Chart, Process Diagrams etc.
- **Data Structures:** Create and define the data structure used in procedures.
- **Algorithms Design:** With proper explanations of input data, output data, logic of processes, design and explain the working of algorithms.

**User Interface Design:** Define user, task, environment analysis and how to map those requirements in order to develop a “User Interface”. Describe the external and internal components and the architecture of user interface. Show some rough pictorial views of the user interface and its components.

**Security Issues:** Discuss Real-time considerations and Security issues related to the project and explain how the student intends avoiding those security problems. What are the security policy plans and architecture?

**Test Cases Design:** Define test cases, which will provide easy detection of errors and mistakes with in a minimum period of time and with the least effort. Explain the different conditions in which the students wish to ensure the correct working of the project.

## Chapter 5: Implementation and Testing

**Implementation Approaches:** Define the plan of implementation, and the standards the students have used in the implementation.

Coding Details and Code Efficiency: Students not need include full source code, instead, include only the important codes (algorithms, applets code, forms code etc). The program code should contain comments needed for explaining the work a piece of code does. Comments may be needed to explain why it does it, or, why it does a particular way.

The student can explain the function of the code with a shot of the output screen of that program code.

- Code Efficiency: The student should explain how the code is efficient and how the students have handled code optimisation.

Testing Approach: Testing should be according to the scheme presented in the system design chapter and should follow some suitable model – e.g., category partition, state machine-based. Both functional testing and user-acceptance testing are appropriate. Explain the approach of testing.

- Unit Testing: Unit testing deals with testing a unit or module as a whole. This would test the interaction of many functions but, do confine the test within one module.

- Integrated Testing: Brings all the modules together into a special testing environment, then checks for errors, bugs and interoperability. It deals with tests for the entire application. Application limits and features are tested here.

Modifications and Improvements: Once the students finish the testing they are bound to be faced with bugs, errors and they will need to modify your source code to improve the system. Define what modification are implemented in the system and how it improved the system.

## Chapter 6: Results and Discussion

Test Reports: Explain the test results and reports based on the test cases, which should show that the project is capable of facing any problematic situation and that it works fine in different conditions. Take the different sample inputs and show the outputs.

User Documentation: Define the working of the software; explain its different functions, components with screen shots. The user document should provide all the details of the product in such a way that any user reading the manual, is able to understand the working and functionality of the document.

## Chapter 7: Conclusions

Conclusion: The conclusions can be summarised in a fairly short chapter (2 or 3 pages). This chapter brings together many of the points that would have made in the other chapters.

Limitations of the System: Explain the limitations encountered during the testing of the project that the students were not able to modify. List the criticisms accepted during the demonstrations of the project.

Future Scope of the Project describes two things: firstly, new areas of investigation prompted by developments in this project, and secondly, parts of the current work that was not completed due to time constraints and/or problems encountered.

## REFERENCES

It is very important that the students acknowledge the work of others that they have used or adapted in their own work, or that provides the essential background or context to the project. The use of references is the standard way to do this. Please follow the given standard for the references for books, journals, and online material. The citation is mandatory in both the reports.

## GLOSSARY

If you the students any acronyms, abbreviations, symbols, or uncommon terms in the project report then their meaning should be explained where they first occur. If they go on to use any of them extensively then it is helpful to list them in this section and define the meaning.

## APPENDICES

These may be provided to include further details of results, mathematical derivations, certain illustrative parts of the program code (e.g., class interfaces), user documentation etc.

In particular, if there are technical details of the work done that might be useful to others who wish to build on this work, but that are not sufficiently important to the project as a whole to justify being discussed in the main body of the project, then they should be included as appendices.

## VI. SUMMARY

Project development usually involves an engineering approach to the design and development of a software system that fulfils a practical need. Projects also often form an important focus for discussion at interviews with future employers as they provide a detailed example of what the students are capable of achieving. In this course the students can choose your project topic from the lists given in Unit 4: Category-wise Problem Definition.

### **\* NOTE ABOUT PROJECT VIVA VOCE:**

Student may be asked to write code for problem during VIVA to demonstrate his coding capabilities and he/she may be asked to write any segment of coding used in the in the project. The project can be done in group of at most four students. However, the length and depth of the project should be justified for the projects done in group. A big project can be modularised and different modules can be assigned as separate project to different students.
