INTRODUCTION

The first confirmed case of COVID-19 in India was reported in the southern state of Kerala on 30.01.2020, of a 20-year-old female returning from Wuhan. Sixteen months later, the reported cumulative case count stands at 2.83 Crores. Globally, India stands second only to the United States (US) in absolute numbers of cases. In proportion to India's entire population, the cases comprise to 2%. As on 3.06.2021, India has had over 3 Lakhs deaths due to COVID-19, the highest number in the world after the US and Brazil. In terms of deaths per million population, India's number is 234. India officially launched its COVID-19 vaccination drive on 16.01.2021, with two approved vaccines – Covishield and Covaxin. As on 03.06.2021, based on the reports of the Ministry of Health and Family Welfare (MoHFW), India has administered just over 22.10 Crores vaccine doses. Of India's 138 Crores population, only 4.51 Crores have been fully vaccinated at the end of June 2021 –about 3.26% of the total population. The US, for instance, has fully vaccinated 41.00% of its population. Analysts agree that, a quick vaccine rollout is India's only way through the pandemic. On 30.05.2021, the Government informed its citizens that, while a little more than 7.90 Crores doses of COVID-19 vaccine were available with the states in May 2021, nearly 12.00 Crores doses will be made available in June 2021.
